

# Evidence Vault

Content-addressed artifact/release vault with deterministic sealing, release events, signature verification and controlled export.

IP-4269 · Engineering software · Software / tooling

## Function and architecture

- Content-addressed artifact/release vault with deterministic sealing, release events, signature verification and controlled export.
- Evaluation and enterprise licensing
- Controlled release and integration scope

## Integration summary

Evidence Vault: Content-addressed artifact/release vault with deterministic sealing, release events, signature verification and controlled export. Delivered as Software / tooling. Integrate the selected version at its documented input/output boundary; retain source and configuration identity with each result. The exact callable API, dependencies and runtime environment are supplied with the controlled release; this public description is not a substitute for that release contract.

## Technical record

|                      |                                                                                                                                    |

| Engineering boundary | Content-addressed artifact/release vault with deterministic sealing, release events, signature verification and controlled export. |
| Deployment           | Software / tooling; 1.0                                                                                                            |
| Operational scope    | Generated hardware and third-party tool results require their own exact-release qualification.                                     |

## Delivery and release binding

- Versioned package and dependency lock
- Deployment environment and access controls
- Input/output schemas and integration examples

- Evaluation scope, support and update policy

Confirm for the selected release: Environment and dependencies, Version / build hash, API compatibility, License and support scope.

## **Evidence and qualification**

The controlled product-release layer includes executable reference surfaces and qualification records. Request the exact selected release bundle.

Generated hardware and third-party tool results require their own exact-release qualification.

Canonical status: P2 / EXECUTABLE SOFTWARE + LOCAL REGRESSION; ENTERPRISE SCALE/EXTERNAL DEPLOYMENT OPEN

Source basis: Bible v7.42 §112 / §135, IP-4269

## **Evaluation and licensing**

Evaluation: Evaluate the named software release. Production: Team or enterprise deployment. Custom work: Workflow and API integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
